

Rope Access Inspection Programs

INSPECTION SERVICES

MISTRAS' Rope Access Center of Excellence (COE) provides the technology to access and inspect difficult to reach locations using certified rope access specialists. Our solution replaces and minimizes the need to erect scaffolding, heavy cranes or sky lifts to access difficult or inaccessible areas. Industrial rope access allows companies to complete their inspection projects in the most cost-effective and timely fashion resulting in large overall cost savings especially where traditional access expenses comprise a major portion of the overall budget.

ROPE ACCESS AS A SOLUTION

Rope Access is a proven method of achieving a safe work position at height or in difficult access areas for industrial sectors such as offshore, industrial plants or buildings.

Non-Destructive Testing (NDT) is performed by our trained personnel with special access equipment. The same operational equipment can be used for follow-up maintenance activities, provided these activities are managed by our industry experts.

MISTRAS Rope Access technicians perform both traditional and advanced NDT service inspections.

MISTRAS has delivered an exemplary safety record based on a commitment to thorough training and diligent operational procedures. This record comes from employing a well-trained and supervised work force in a safe work environment. Our management and staff are certified through the International Rope Access and Trade Association (IRATA).

The MISTRAS Rope Access program, procedures and training have been approved and meet the guidelines specified by IRATA.

Benefits of Rope Access

- Dramatic reduction in scaffold or equipment rental saving time and money
- Less asset damage
- Less equipment setup
- Less congestion - no scaffolding or lift device setup
- Access to highly congested areas
- Minimal personnel required for project execution

MISTRAS provides required training and proficiency testing prior to the utilization of our system.
